ABOUT US

BLUE LINE ENVIRONMENTAL SERVICES is a well-established services company specialized in efficient cleaning and swimming pool maintenance service. Licensed by Dubai Municipality and considered amongst the best service providers in UAE today. We offer you world class service in the cleaning of water tanks, waste water tanks, Kitchen hood, AC duct, Swimming pool maintenance and more.

In addition we are specialized and licensed for grease trap installation and handling waste edible oil lifted from grease traps. Supply of sweet water to construction sites and removal and safe disposal of drainage water, drainage water tank cleaning are also the main services. Blue line takes the job of Lift Station (Sump Pit) cleaning on call/contract basis. Robotic camera inspection, Drain Line Jetting service to remove the blocks in the drainage line to ensure free flow of drainage water are also another services rendered by us.

We are well equipped with sufficient fleet of vehicles and personnel for meeting the water tank, waste water tank, kitchen hood, Lift station, AC duct cleaning services requirements as well as for maintenance of swimming pool and sewage systems. Moreover, our employees are experts in the field with technical background and ample experience.

SUSTAINABILITY

"Sustainability is an unshakeable commitment for the future, taken today!"

The growing world population and the fast pace of development have more and more pressure on natural resources. Today as we are beginning to learn that environmental resources are limited and are quite sensitive to everything that we do, we are more cautious in using them. To make sure that future generations will not be experiencing the worse, we need to be aware of the ideals and requirements of sustainability. In our environmental services we are committed to providing the highest quality cleaning and maintenance service available by exceeding the expectations of our clients, as well as their employees and visitors to their premises or facilities through continuous improvements in Quality, Services and Productivity. At Blue line improvement is an ongoing process.

SWIMMING POOL MAINTENANCE

Swimming pool is a major investment. Protect yours with a pool maintenance package from Blue Line. We are in business to protect your investment in your swimming pool by providing the highest quality pool cleaning service at a competitive rate with a full-service pool cleaning, repair, and maintenance company servicing both residential and commercial customers. by investing in pool maintenance, you'll be lowering your chances of encountering a major issue with your pool when you want to use it the most.

Our passion is to give all pool owners an attractive view of their pool free from stress and maintenance headaches. We know how you want to truly enjoy your swimming pools (without worrying about your pool technician) and that's why all the work of our cleaning & maintenance technicians stands on top of our Service Satisfaction Guarantee.

Some people may find swimming pool maintenance an easy task, so that they prefer to look after their pool by themselves. However, more often than not, it entails tedious tasks. A swimming pool system consist of electro-mechanicals that need to be looked after (i.e, pumps, filters, heaters, heat pumps, skimmers, etc.) and failure to recognize symptoms of breakdowns in any of these electro-mechanicals will only result to greater damages, thus, costing you more. And let's not forget, there are certain water parameters in which standards were already set by the industry authorities to ensure that the pool is safe to swim in, unless met, your pool can be unsafe to use

We offer wide range of swimming pool services to our clients

Pool Cleaning

To keep your pool sparkling clean, regular pool maintenance is important. We offer Annual packages for periodic pool cleaning.

Pool Tile Repair

Our Highly-skilled labour are best when it comes to restoring your swimming pool, we fix tiles and grouting without leaving any residue behind.

Water Pump Repair

Unusual sound or pool pump isn't working, our expert technicians are the right professionals to find and rectify the issue.

Leakage Repair

Underwater pool damages can cause water leakage, our team will detect any minor leakage and fix it right with proper applications.

Pool Light Repair

We specialize in swimming pool light repair or installation without draining the pool water, our belief is in saving water.

TANK CLEANING

Why is it essential to rely on expert services for water tank Cleaning?

The internet is filled with loads of videos showing how to clean your septic and sewage tanks and you can give it a try. However, if you don't do it properly, you should know that you are risking the health of your entire family and it involves the following issues:

1. **The trouble involved:** Sewage tank cleaning is not as easy as it may seem. The very first step of cleaning is to empty the content which requires proper disposal. You can easily rely on Blue Line for such troubles.
2. **Hard Fixes:** Sometimes overflowing goes to an extent that most of your drain line and tanks need repair. And you obviously need a professional to do that. What's better than trying out the septic and sewage tank cleaning services of Blue Line before it gets too late?
3. **Malodorous Smell:** If your septic and sewage tank remains dirty for too long, it may start to smell bad. Yes, the sediment formation, residue settlement, and bacterial formation can mix with the groundwater and ultimately make it unfit for use. What's the solution? It is better to call up septic and sewage tank cleaning services in Dubai before negligence takes a toll on your health.
4. **Waterborne diseases:** If you won't clean your water tanks for years, get it straight, you will be building a house for harmful viruses and bacteria. It can give rise to various diseases and eventually one of your family members or you could fall into the trap. There is a long list of diseases such as diarrhea, cholera, and typhoid that you will be vulnerable to. How can you stop it? Simply call Blue Line up, one of their teams will come and survey the tanks to begin the cleaning process. And in one or two days, your tank will be sanitized. It is that simple.

How tank cleaning is done?

Step 1: The process begins with assessing the septic tank.

Step 2: Then the entire tank is disinfected.

Step 3: All the sludge and solid wastes are drained out using a sludge pump.

Step 4: Then begins the process of removing all the sediments, dirt, stains, and fungus using high precision equipment.

Step 5: Next comes the high-pressure jet that cleans off the Walls, ceiling, and floor.

Step 6: A vacuum cleaning technique is used to suck out all the remaining dirt.

Step 7: Then an anti-bacterial spray or liquid bleach is used to completely disinfect the tank.

Step 8: The tank and the surrounding area is subjected to UV radiation to clean of any harmful bacteria.

Step 9: The tank is completely drained and left for drying.

Step 10: Voila! The tank is clean and ready to use.

Cleaning septic and sewage tanks may look a tedious process but with the assistance of an expert such as Blue Line, the task will become seamless for you.

Blue Line provides some of the specific cleaning services which are safe and highly reliable. Our experts provide heavy industrial cleaning services in a safe and secure way. Large sewage and irrigation tanks are cleaned very easily using expert methods. Sewage tanks are cleaned and pipelines are freed of dirt, and later the waste is disposed of in an eco-friendly manner. Thus there is no problem of polluting the environment. At Blue Line, we use unmatched and innovative techniques to get rid of the waste that creates a problem for the normal functioning of industry work.

LIFT STATION CLEANING (SUMP PIT CLEANING)

Sewage pump pit and sump pumps work to pump out the sewage and waste water. When these Sump pits accumulate debris that cannot be pumped out our role begins. Over flow and full septic sewage sump pits spread odor and drain lines blockage. Cleaning of the sump is typically carried out by our experienced engineers. Our engineers will be able to recommend bespoke cleaning. Cleaning out a sump pit is something that most homeowners do not think to do. That is until the sump pump stops working and they discover there are sediment and debris buildup causing problems.

ROBOTIC CAMERA INSPECTION

Since light rays moves straight line only, to see what is beyond the bend is impossible. Camera inspection is the best solution. Regular inspection can help keep operation safe and reach the expected lifespan of the pipeline in entry restricted areas. At this instant decide the course of action to rectify faulty drain without breaking it. Basic visual inspection can be done visually from the outside. Inspection of inaccessible parts, or when getting more information than from just a visual check is necessary, special tools must be used.

FAQs

What is water jetting?

A water jet sends highly pressurized water through a nozzle at the end of a hose, which is inserted into the drain line. Water jetting is a relatively recent addition to the array of tools available for drain cleaning service.

Why is water jetting important?

Water jetting is ideal for removing grease stoppages from inside a drain pipe. Water jetting is advisable in dealing with a grease stoppage and removing it.

Why does hydro jetting work?

A plumber uses a hydro jet which is made up of a water tank, a pressurizing system, and a hose with a specialized nozzle to clear buildup within a drain or sewer.

What are the benefits of drain jetting?

Because of the high pressure, hydro jetting allows for the fast, efficient removal of clogs. Additionally, hydro jetting can be used to clear large clogs and tree roots that may be blocking the flow of a pipe. Hydro jetting also clears out grease, minerals, hair, and other buildup leaving your pipes clean and less susceptible to future clogs.

When do I need water jetting?

When a homemade or store-bought drain cleaner isn't enough, that's when you know you need to call the professionals at All Ways Drains for professional water jetting. Water jetting is also ideal for cleaning and root cutting when drains are still draining slightly, a total blockage will have to be assessed by an expert.

Do I need professional to perform water jetting?

Our trained professionals are properly trained in the use of water jetting equipment and how to direct the hoses along the walls of your pipes and effectively clean out the length of a sewer line.

GREASE TRAP CLEANING AND INSTALLATION

We focus to keep you in compliance with the Local Authority's guidelines on the best management practice for Grease traps. Sanco Environmental Team is available for the installation of grease trap and play an advisory role with the help of architect/designer.

Our experienced team members will take care of your grease trap needs in a timely and professional manner. During the process of grease trap installation we make sure that the grease bearing devices and fixtures are properly connected to the abatement system based on the requirement and situation.

We provide long-term kitchen duct and hood cleaning services contract for residential and commercial places in Dubai. It will also help to keep these systems working at their best.

We, at Blue line, offer superior quality kitchen duct cleaning services in Dubai. We are committed and determined to bring safety to not only your kitchen but to your entire space through our specialized services. You might be aware of the fact that kitchen exhaust fans are sources of healthy air and exhaustion of the smoke from the kitchen. The dirty kitchen exhaust, or the duct may pose major threats, like unsafe work areas and chances of a house fire.

Blue line has a highly experienced team for kitchen duct & hood cleaning services in Dubai. We are a premium maintenance company offering a wide range of kitchen duct & hood cleaning services for your commercial and residential property. We provide the most responsive maintenance services. Kitchen duct & Kitchen hood cleaning are one of the primary defenses against fire hazards through regular maintenance. It helps to keep the kitchen exhaust systems working at their best, ensuring evacuation of smoke and grease out of the building more effectively.

AC DUCT CLEANING

AC DUCT CLEANING

In order to ensure that conditions for building occupants are comfortable and safe, building owners and managers have both a 'duty of care' and legal obligations to ensure that ventilation systems are kept clean by the most efficient ductwork and duct cleaning methods.

HEALTH & HYGIENE ISSUES DUE TO UNCLEARED AC DUCTS

- It has been found in hospitals that temperature and humidity levels allied with accumulations of dust and debris, typically found in uncleaned air conditioning ductwork, provides ideal conditions for the growth and spread of infectious micro-organisms such as MRSA.

- In a similar way, infections such as flu and the common cold will spread throughout the workplace if systems are not maintained and cleaned.

HOW DO WE KEEP OUR INDOOR AIR CLEAN?

- Increase the number of plants in the Office/ Home.
- Use Non Aerosol Air Freshener.
- Change Filters regularly.
- Clean the Ducts with the HEPA Filters at least once in a year.

STEPS IN AC DUCT CLEANING?

- Clean the furnace/air conditioner.

After testing the system for proper operation, we will disconnect the power before opening the unit for safety. Next, vacuum the interior surfaces of the Furnace/Air Conditioner. Then clean the cooling coils with a HEPA vacuum and a coil cleaner, and clean the blower unit.

- Clean the supply and return registers and grills.

Remove wall, ceiling and floor registers. Then wash register with Dynamite cleaner and rinse.

- Clean the supply and return ducts.

Clean all air ducts using powerful air duct cleaning equipment. Decontaminate cleaned ducts with Soot Set duct sealant, and Odor Kill Deodorizer.

- Install electrostatic air filter and odor control products.

Install Solid Odor Kill in the return to control odors for up to 3 months.
